Summary

Data-driven Front-End Developer with professional experience architecting and shipping production-ready React, React Native, and TypeScript applications. Specialized in functional programming principles, robust state management patterns, and building predictable unidirectional data flows. Proven track record of collaborating in fast-paced Agile/Scrum environments to deliver clean, highly maintainable codebases across international teams.

Skills

🔗 Languages	🔗 Frameworks & Libraries	🔗 Styling & UI	🔗 Methodologies & Tools
JavaScript (ES6+), TypeScript	React, React Native, Angular , Angular Material , Angular CDK	Tailwind CSS, Chakra UI,NativeWind,MaterialUI,shadcn,NgRx,SCS Design	Agile,Scrum, Webpack, Git, Jest,Cypress

Experience

- Superz | Senior Front-End Developer

02/2025-03/2026 | Remote

 - Led the front-end architecture of an enterprise project management platform using **Angular** (standalone components) and **TypeScript**, establishing scalable patterns for feature delivery across multiple teams.
 - Implemented predictable state management with **NgRx** (Store, Effects, Entity, ComponentStore) and **RxJS** to model complex workflows, optimistic updates, and real-time UI synchronization.
 - Built a responsive, accessible design system with **Angular Material** + **CDK** and theming via **SCSS** design tokens, delivering consistent typography, spacing, and component behavior across the app.
 - Improved rendering performance with **OnPush** change detection, **trackBy** strategies, and reactive composition; reduced unnecessary re-renders and tightened bundle footprints through route-level splitting.
 - Established testing and quality gates using **Jest** (unit),**Testing Library** (component), and **Cypress** (e2e), aligning delivery with **Agile/Scrum** ceremonies and rigorous PR review standards.
- Press'nXPress | Front-End Developer

04/2024 – 10/2024 | Canada / Remote

 - Engineered and optimized high-performance **React Native** screens for a core, real-time employee feedback mobile application used at scale.
 - Championed the adoption of the **Elm architecture** pattern to enforce a strict unidirectional data flow, significantly reducing application bugs and improving state predictability.
 - Designed and integrated robust **REST API** communication layers to ensure smooth, asynchronous data fetching and state synchronization across multiple product features.
 - Applied strict functional programming paradigms to keep UI components pure, side-effect-free, and highly reusable.
 - Utilized **TS-Pattern** to implement exhaustive compile-time pattern matching in **TypeScript**, drastically mitigating runtime errors.
- Rahnema College | Front-End Developer Intern

06/2023 – 09/2023 | Tehran

 - Developed a full-featured, dynamic social media application from scratch utilizing **React** and **TypeScript**.
 - Built consistent, responsive, and pixel-perfect user interfaces by leveraging **Tailwind CSS** and **Chakra UI** component libraries
 - Architected the global application state using **Redux** to manage complex user interactions and data flows efficiently.
 - Collaborated actively within an **Agile/Scrum** framework, participating in daily standups, sprint planning, and rigorous peer code reviews via **Git**.

Education

Azad University | Software Engineering (Tehran,2026)

Projects

- TaskManagerEvolution | Angular, TypeScript, RxJS, Vanilla JS, Jest

05/2026 – Present

 - Migrated a task management application from Vanilla JS to **Angular** to optimize rendering and state management.
 - Utilized Angular services, structural directives, and **RxJS** observables to handle complex asynchronous data streams.
 - Implemented a comprehensive unit testing suite using **Jest** to validate core application business logic.
- Frontend Performance Tooling Build | Webpack , Babel

2025

 - Engineered a production-ready frontend build configuration from scratch using **Webpack** to master custom asset bundling.
 - Implemented build optimizations (code splitting, minification) and configured local dev-servers with Hot Module Replacement.
